german vaccine side effects data

german insurer claiming side effects are MUCH higher than public data claims

el gato malo

229

this is a potential bombshell piece of data. it's not yet vetted, so let's all be careful on degree of certainty to ascribe, but this is both exactly where you would expect a signal like this to emerge and certainly foots with reams of both anecdotal and hard data alike.

this is very much a story to be run down and a set of facts we want to get to the bottom of.

and it's clearly a set of facts we cannot trust the agencies that mandated and hectored about these products to be honest with us about.

but the insurance companies are going to get a good look.

so let's see what they have to say:

JUST IN - Large German health insurance company analyzed data from 10.9 million insured individuals regarding vaccination complications.

The new data is "alarming," says BKK board member Schöpfbeck in a report by WELT.

Coronavirus: Mehr Impf-Nebenwirkungen als bisher bekannt - WELT
Eine Analyse von Millionen Versichertendaten der Betriebskrankenkassen BKK kommt bei den Nebenwirkungen auf erheblich höhere Zahlen als das Paul-Ehrlich-Institut. Die neuen Daten seien ein „Alarmsignal“, sagt BKK-Vorstand Andreas Schöpfbeck.

MORE - The letter from Schöpfbeck, BKK board member, on the subject

64225 Langer		the Paul Ehrlich Institute is often omitted because of the great effort. Doctors have an obligation that the notification of a suspected vaccine damage case should not wait until an hour or a claim. This means that a patient suspected of vaccine damage should be notified 1.5 hours after the vaccination. This should also be clarified at all health insurance companies. A copy of this letter is also sent to the Federal Medical Association and the Kasselerische Bundesversicherung.
Severe warning signal for covid vaccine side effects after corona vaccination		The GKV-Spitzenverband will also receive a copy of this letter with the request to initiate appropriate data analyses from all health insurance companies. Since danger to the lives of people cannot be ruled out, we ask you for a Comment on the measures taken by 22.02.2022 18:00.
Dear Prof. Dr. Schickel,		Best regards
The Paul Ehrlich Institute has announced in a press release that for the calendar year 2021 444,576 Suspected cases of vaccine side effects after corona vaccination have been reported. The data available to our house give us reason to believe that there is a very significant upward reporting of suspected cases of vaccine side effects after corona vaccination over the years. For this, I attach an evaluation to my letter. The data basis for our evaluation is the billing data of Acta. Our sample is made from the anonymized database of the company health insurance funds. The sample includes 9.937.716 insured. We have so far received the accounting data of the Acta for the 3rd half of the year 2021 and about half for the third quarter of 2021. Our query includes the ICD-10 codes for vaccine side effects. This evaluation has shown, although we have not yet received the complete data for 2021 are available. But based on the available figures, we have already 216,659 treated cases of vaccine side effects after corona vaccination from this. It is a random sample. Unless these figures are based on the full year and on the		<i>Wolfgang Schickel</i> Andreas Schöckel Board The letter is also sent in full GKV-Spitzenverband Fusion: 2022.02.22
64225 Langer		an der Paul Ehrlich Institut eines großen Aufwandes wertlos unterbreitet. Ärzte haben ein berufliches, das Meldung eines verdächtigen Vaccine-Schadens nach eine halbe Stunde Zeit in Anspruch nimmt. Das bedeutet, dass 1 Millionen Versicherungsnehmer auf Impfnebenwirkungen 1,5 Millionen Arbeitsstunden an Ärzten und Ärzten aufwenden. Das wäre nahezu die jährliche Arbeitsleistung von 1000 Ärzten und Ärzten. Diese sollte etwas schneller gehen werden. Deshalb ergibt eine Durchsicht dieses Schreibens auch in der Bundesärztekammer und der Kasselerischen Bundesversicherung.
Helfiges Warnsignal bei covidten Impfnebenwirkungen nach Corona Impfung		The GKV-Spitzenverband erhält ebenso eine Abschrift dieses Schreibens mit der Bitte entsprechende Datenanalysen für sämtlichen Krankenkassen einzuleiten. Da Gefahr für das Leben von Menschen nicht ausgeschlossen werden kann, bitten wir Sie um eine Rückmeldung über die veranlassenen Maßnahmen bis 22.02.2022 18:00 Uhr.
Sehr geehrter Herr Prof. Dr. Schickel,		Mit freundlichen Grüßen
Die unserem Haus vorliegenden Daten geben uns Grund zu der Annahme, dass es eine sehr erhebliche Unterbewertung von Verdachtsfällen für Impfnebenwirkungen nach Corona Impfung gibt. Dazu lege ich meinen Schreiben eine Auswertung bei. Datengrundlage für unsere Auswertung sind die Abrechnungsdaten der Acta. Unsere Stichprobe erfolgt aus dem anonymisierten Datenbestand der Betriebskrankenkassen. Die Stichprobe umfasst 19.937.716 Versicherte. Diese bilden die Abrechnungsdaten der Acta für das erste halbe Jahr 2021 und etwa zur Hälfte für das dritte Quartal 2021 von. Unsere Anfrage beinhaltet die folgenden ICD-Codes für Impfnebenwirkungen. Diese Auswertung hat ergeben, obwohl uns noch nicht die kompletten Daten für 2021 vorliegen, dass wir anhand der vorliegenden Daten bereits schon von 216.659 behandelten Fällen von Impfnebenwirkungen nach Corona Impfung aus dieser Stichprobe aspierten. Wenn diese Zahlen auf das Gesamte und auf die Betriebskassen in		<i>Wolfgang Schickel</i> Andreas Schöckel Vorstand Das Schreiben ergibt durchschnittlich ebenso an: GKV-Spitzenverband Fusion: 2022.02.22

Accounting data from the health insurance companies prove the safety disaster of gene vaccines

While the CDC now concedes that more vaccination complications occur than appear in the reporting systems ("underreporting"), the Paul-Ehrlich-Institut remains stubborn in claiming that there are complete reports. Instead, one even assumes overreporting, since many people would report symptoms that happened at the same time as vaccination-associated and there was still great nervousness in general about the new technological platforms of RNA and DNA vaccinations. Official billing figures from statutory health insurance companies prove the opposite and give an idea of the health disaster we are heading towards.

Search for traces in the medical records of the BKK

Diagnoses are classified and coded according to the international standard ICD10. There is a corresponding alphanumeric code for each diagnosis, including vaccination complications. Relevant are T88.0 (infection after vaccination - shingles is currently very popular), T88.1 (other complications after vaccination), Y59.9 (undesirable side effect when using vaccines) and, brand new since 2021, U12.9 (undesirable side effect when using Covid-19 vaccines).

Spoilers: the numbers are not for the faint of heart.

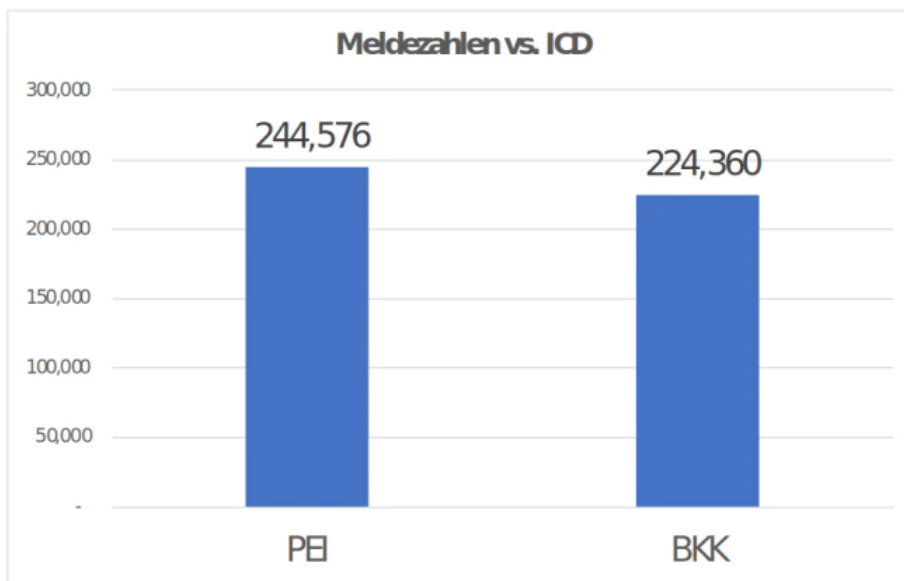

According to the official figures from the PEI, where do we stand now? As of the last safety report, there have been 244,576 suspicious activity reports since the start of the vaccination campaign (14 months) - nationwide, which includes a population of 82 million people.

this seems a sensible approach.

doctors many avoid filing vaccine adverse events reports with agencies. it's extra work and they are under pressure not to. BUT they are going to bill for treatment. because doctors always bill for treatment.

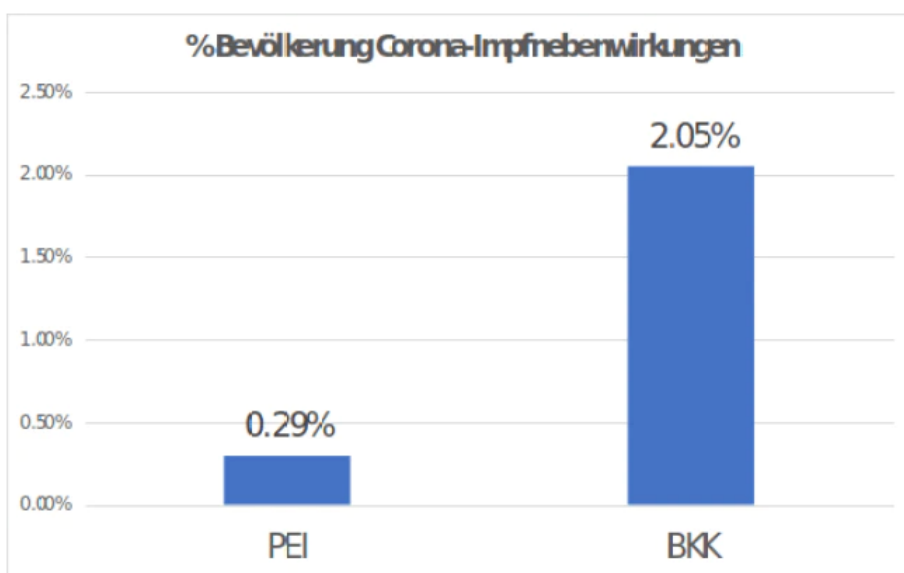

and now here is where it starts to get scary:

In the first 2 ½ quarters of 2021 (7.5 months) alone, the BKK accounted for 224,360 vaccination complications - with almost 11 million members:

and this is the big conclusion:

Based on these figures, one can now calculate the incidence of vaccination complications for both populations. Then there are 0.29% according to the PEI and 2.05% according to the billing system:

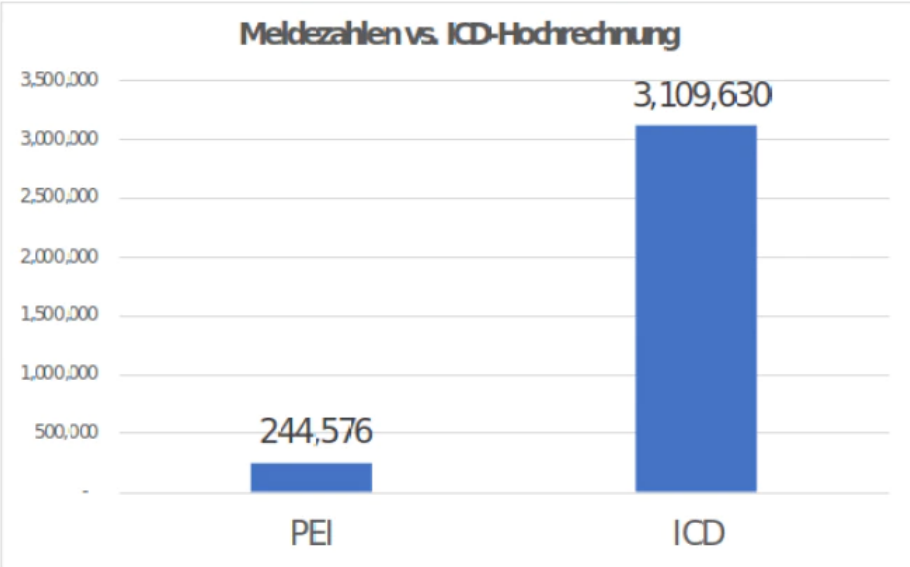

it shows that in the first half of 2021 the rate accounted for by the insurer is 7X higher than the

PEI (german VAERS) for the whole year.

Gesamtfaktor	X 13,86	
Hochrechnung	224.360 x 13,86	3.109.629

serious:

fatal:

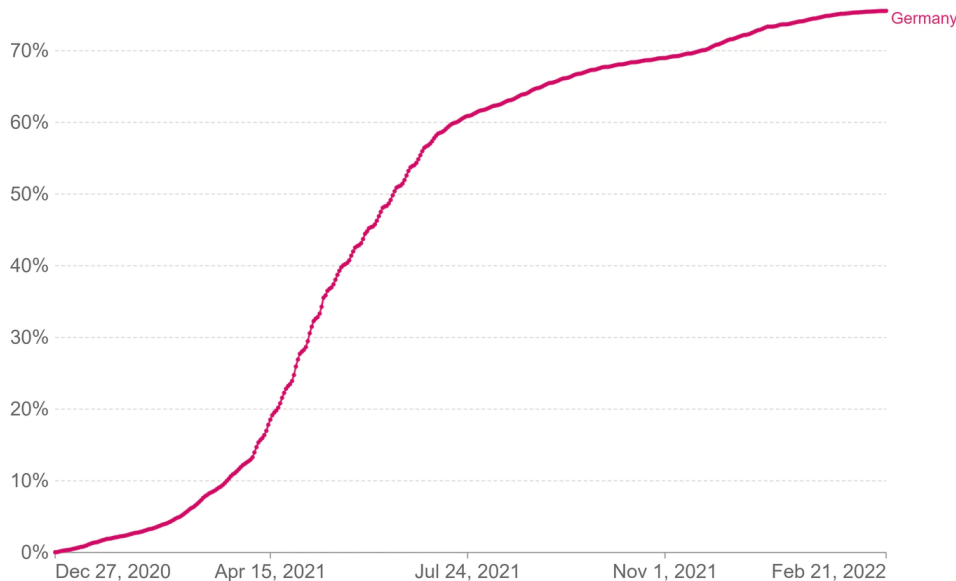

now, let's once more be clear, these are estimates and extrapolations but they seem reasonably arrived at.

and if they are true or even close to true, they are STAGGERING. germany had ~79k "covid deaths" in 2021 (and we know how over-inclusive that counting can be.) how many were "vaccine deaths"? or were these in addition?

and this foots with other data. vaccines really took off in germany in about april 2021. (this is another reason to wonder if the rate will rise further in H2 when we get insurance data)

Share of people who received at least one dose of COVID-19 vaccine

Total number of people who received at least one vaccine dose, divided by the total population of the country.

and shortly thereafter, excess all cause mortality vs 2020 jumped from negative levels (blue) to positive (orange) and stayed that way for most of the year.

that is very much the opposite of what one would expect if vaccines were working, especially given higher rates of natural immunity and depletion of vulnerable cohorts.

and if this is not quite a smoking gun, it certainly does look like an awful lot of smoke in the known vicinity of a firearm to simply ignore.

For the 11 million BKK insured persons, the following figures result in a year-on-year comparison (entire year 2020, two and a half quarters of 2021) for all "vaccination complications" accounting figures:

and VAERS has shown the same.

all in all, this is a pretty massive canary to see drop dead in your coal mine and warrants immediate and serious work.

Our use of cookies like what it looks like (and once more, let's be clear, we need to validate this but we're seeing an awful lot of consonance from independent data), this is going to be one of the more detailed information about the cookies we use, please see our privacy policy.

great scandals in human history. it will make thalidomide look like forgetting your house keys.

the lack of urgency or even interest from public health agencies on this issue has been astonishing.

this feels like a “drop everything and get every public health official that can fog a mirror working on it” kind of issue.

instead we get crickets and stonewalling.

not terribly confidence inspiring, is it?

Since it applies here, I'll repeat the comment I made at the eugyppius post about this:

I think the data coming out of the life/health insurance companies is going to be the wrench that helps the wheels finally detach from the bus. Insurance companies are taking a massive financial hit while funeral company stocks are skyrocketing, and people are starting to notice as per Edward Dowd:

<https://rumble.com/vv12ca-february-15-2022.html>

PSA: Governor DeSantis has until tomorrow (2/24) to veto HB 7021, which would extend the liability protections hospitals/medical facilities currently receive for implementing murderous COVID protocols.

I've published my letter to Gov. DeSantis here:

<https://margaretannaalice.substack.com/p/letter-to-governor-ron-desantis>

I'm hoping people will join me in contacting DeSantis with their own messages along with a link to my article if desired.

Emails should be sent to:

FloridaSurgeonGeneral@flhealth.gov

Casey.Smith@eog.myflorida.com

Brandy.Brown@eog.myflorida.com

media@eog.myflorida.com

GovernorRon.Desantis@eog.myflorida.com

More details on how to contact Gov. DeSantis here:

<https://margaretannaalice.substack.com/p/letter-to-governor-ron-desantis/comment/5208984>
